

# CONSTRUCTECH TOP '15 PRODUCTS RESIDENTIAL

*Expect More From BIM*

“BIM Pipeline creates that important link between design and estimating for more accurate, automated takeoffs. By helping customers manage BOM reports for options, tasks, and performance, CG Visions is helping today’s residential builders stay profitable.”

—Constructech editors

## BIM Pipeline

## LEVERAGING BIM FOR TAKEOFFS

Data—including BIM (building information modeling)—is only as good as a company’s ability to leverage this data. CG Visions’ BIM Pipeline is a Web-based, rules-driven estimation and material-management system that allows builders to use BIM data to help drive takeoffs. With BIM Pipeline, users can create master-plan estimates with delta BOM (bill of materials) reports for options, track lot-specific as-built reports, and track

client customizations. An enhanced user experience includes data portals that allow builders to visualize tasks, home sales, and options. *Constructech* editors recognize BIM Pipeline’s ability to offer business intelligence optimized for the residential market.
